

Type SMP

modular @ level

Modular continuous fill level measuring

Basic features

- ▶ Particularly suitable for the fill level measuring in small-sized blending tanks with viscous, paste-like and highly adhesive media
- ▶ Application in all electrically conductive media with a minimum conductivity of $50\mu\text{S}/\text{cm}$
- ▶ Automatic detection of the fitting position fitting position top/bottom
- ▶ Device completely made of high-grade steel 1.4404
- ▶ Compact design with integrated evaluation Circuit 4...20mA
- ▶ FDA, EHEDG-conformal

Technical features

- ▶ Potentiometric measuring principle
- ▶ Probe completely made of high-grade steel
- ▶ Temperature range -20...140°C
- ▶ 2 keys for calibration position 4mA, 20mA
- ▶ Level monitor 0...100% via flasher switch of 2 LEDs
- ▶ Working pressure 10bar max
- ▶ Measuring ranges from 100 mm to 2500mm
- ▶ For standard lengths see order code

Design and mode of operation

The fill level probe SMP represents an extension of our well-tried fill level measuring technology of the modular design.

It is available in the following versions:

- modular, aseptic G1"
- process connection with polymer-free Sealing system

Favoured fields of application are:

- ▶ Continuous fill level measuring in metallic containers, presettling tanks or pressurised tanks with a measuring range of up to 2500 mm max.

Technical data

Process connection

Thread connecting peace G1";
1.4404/ 316L

Material of the sensor

High grade steel 1.4404/ 316L;
Ø 10 mm

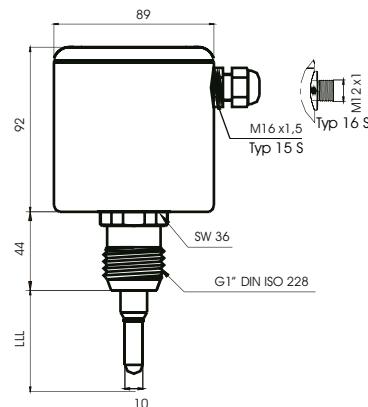

Safety class

IP 67

Output signal

Output: 4...20 mA
18...36 VDC; 200 mA max

Dimension drawing

Signal behaviour

Accuracy $\leq \pm 0,5\%$ incl. Hysteresis and reproducibility
Adm. Burden 500 Ohm max.

Electrical connections

- Cable gland M16
- Plug M12

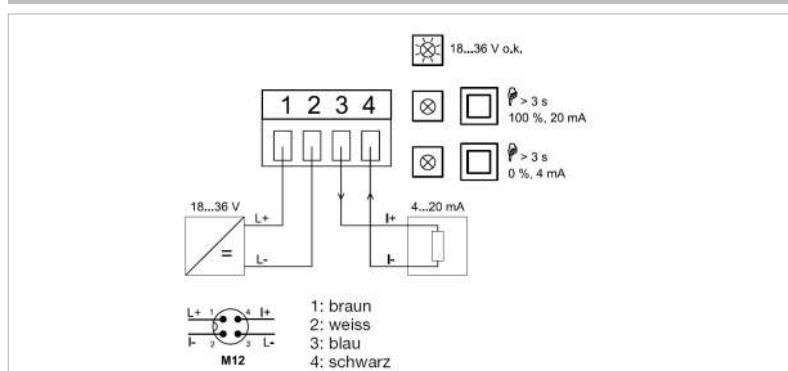

Length of electrode

Standard: 200 mm up to 1500 mm
Option: Special length up to 2500 mm on request

Temperature operating range

Duration process temp.: -20...140°C
Ambient temperature.: -20... 60°C
